

Soil Amelioration, Improvement and Manufacture

Soil Environment Services has developed a strong reputation for consultancy work in this area and provides expert soils advice on all aspects of waste recycling to agricultural land, restoration land or land within general landscaping schemes.

manufactured soils for land restoration on sites which have no topsoil.

To satisfy the Environment Agency, ecological benefit will need to be proved and therefore information on the plant nutrients to be supplied or soil structural improvements must be quantified.

Spreading waste directly on agricultural land

Testing field soils and wastes for nutrient balance assessments can be carried out together with the application for spreading.

All aspects of the application procedure, including liaison with the Environment Agency are managed on your behalf .

Soil manufacture for land restoration

Many different organic matter sources are now increasingly available to help in the production of

Specification of materials and compost for landscape soils.

Landscape schemes typically experience problems related to degraded soils in urban areas and how

best to improve these for use in often prestigious development projects. We survey the soil resources on site, take samples for laboratory analysis, and make recommendations for improvements specific to the planting scheme specified for the development.

'specialist soil
consultants and
soil scientists /
